Summary

Results-driven Electronics and Advanced Communication Engineering student with a strong foundation in Data Structures and Algorithms, ranking in the top 1% on GeeksforGeeks (500+ problems solved). Possesses hands-on experience in frontend and full-stack web development utilizing HTML, CSS, JavaScript, React, Node.js, and MongoDB. Proven track record of building scalable, responsive web applications and applying analytical problem-solving skills to modern technical workflows.

Projects

- Spotify Inspire** | *JavaScript, Jamendo REST API, HTML5 Audio API, Dynamic UI Architecture* **2026**
- Engineered an asynchronous web streaming pipeline using the Fetch API and Async/Await to pull RESTful endpoints from the Jamendo API, creating a hybrid media player that unifies cloud assets and local data catalogs via programmatic flat-mapping.
 - Architected a unified playback engine utilizing the HTML5 Audio API, binding lifecycle event listeners (*timeupdate, load, ended, metadata*) to implement dynamic UI state synchronization, custom progress-bar tracking, and sequential audio queue routing.
 - Developed a client-side search indexing engine executing linear keyword matching over unified in-memory application arrays, providing immediate track routing and responsive UI feedback configurations with integrated edge-case error messaging.
 - Implemented dynamic state arrays to manage real-time tracking of recently played history configurations, optimizing view states and custom execution logic to prevent duplicate memory leaks across user tabs.
 - Live Demo: spotify-inspire.netlify.app
- TravelTales** | *Node.js, Express.js, MongoDB, Mongoose, Nodemailer, Bootstrap, REST APIs* **2025**
- Architected a scalable, full-stack REST API layer using Node.js and Express to manage high-volume customer interaction layers, processing complex data objects for trip bookings and inquiries seamlessly.
 - Engineered a decoupled transaction engine integrating Mongoose ODM with MongoDB, implementing data schema enforcement and structural object mapping to ensure clean consistency across active trip catalogs.
 - Integrated an automated transactional email workflow via Nodemailer and secure SMTP relays, dynamically compiling HTML invoices, personalized booking details, and automated notification sequences upon route execution.
 - Developed a lightweight, single-page client routing framework hooking directly into native browser DOM lifecycle states (*hashchange, DOMContentLoaded*) to execute programmatic rendering transitions without full page refresh overhead.
 - Live Demo: travelwithtraveltales.netlify.app

Education

Alard College of Engineering, Pune <i>B.E. in Advanced Communication Technology</i>	Sep. 2024 – Present <i>Pune, Maharashtra</i>
Government Polytechnic, Pune <i>Diploma in Computer Engineering</i>	2020 – 2024 <i>Pune, Maharashtra</i>

Technical Skills

Languages: Java, Python, C, C++, HTML/CSS, JavaScript, SQL

Frameworks: React, Node.js, Express.js

Databases: MongoDB, MySQL

Developer Tools: VS Code, Eclipse, IntelliJ IDEA, PyCharm, MATLAB, Microsoft Azure

Technologies: Linux, GitHub, Postman

Problem Solving

GeeksforGeeks Top 1% institutional ranking, 500+ algorithmic problems resolved

LeetCode 250+ data structures and algorithms problems resolved
